Installation process and discounts for indicators - trader-algoritmico

In this document I will define the normal process to follow to use the two-month free trial of the indicators, as well as the process once the trial expires. The installable file and the zip install exactly the same thing. The difference and why **the first time you have to use the installable one is to avoid errors, guaranteeing that you have the correct version of Ninjatrader and the permissions to telegram (in case you have telegram), also set other things apart from the indicators, such as the custom sounds that they use, as well as extensions that I make to the ninjatrader itself to improve it.**

For installing the indicators for first time:

1. Go to free resources.
2. Download installer (free trial).
3. Follow the steps in the installer, otherwise you could get errors while using the indicators.
4. Ready! You can find them in **Indicators -> trader_algoritmico** with 2 months of free trial.

When free trial has expired:

1. Go to pricing
2. Click on subscribe to our plans at the bottom.
3. Select license and type of payment (monthly/annual)
4. Write NinjaTrader Machine ID
5. Click on proceed
6. If the payment is complete, you will receive the link for the indicators you have selected.

You can always get the updated installer (Stellar pack) here

You can download the last version to import them into NinjaTrader (Stellar pack) here

Questions or problems: support@trader-algoritmico.com

Documentation (EN): here

Discounts:

> - There is a 2-month free trial.
>
> - One month of free subscription for every two months of subscription (not counting the free trial) of all users referenced by you.
>
> - Two months free with annual payment.

The installable can be shared without problems (trader-algoritmico_stellar.exe) with anyone, it is not recommended to share an indicator update file (TA_Stellar.zip) without the other person having the installable or having previously installed these indicators, since The sound files will be missing and could have errors if you have not followed the steps defined in the requirements.
